大型立式 三相同步电动机

TL SERIES LARGE VERTICAL
THREE - PHASE SYNCHRONOUS MOTORS

上海电机厂有限公司
SHANGAHI ELECTRIC MACHINERY CO., LTD.

一 概 述

TL 系列大型立式同步电动机是本公司生产的多种系列品种之一，历史悠久，结构合理，性能良好。电动机主要传动各种立式水泵。随着水利事业的发展，产量逐年增加。50年来全国各地泵站运行情况证明产品质量可靠，被评为一机部信得过产品，上海市优质产品，深受用户欢迎。

如：安装在江苏省江水北调工程的大小泵站，安徽省驷马山引水工程各泵站，湖北省各地区大型排灌站以及广东省东深送水工程等泵站中的本公司立式电动机都在发挥作用，保证了各地区的农业水利事业的顺利发展。

TL 系列为大型立式三相同步电动机，传动各类型立式水泵。按国家标准 GB755《电机基本技术要求》制造。

INTRODUCTION

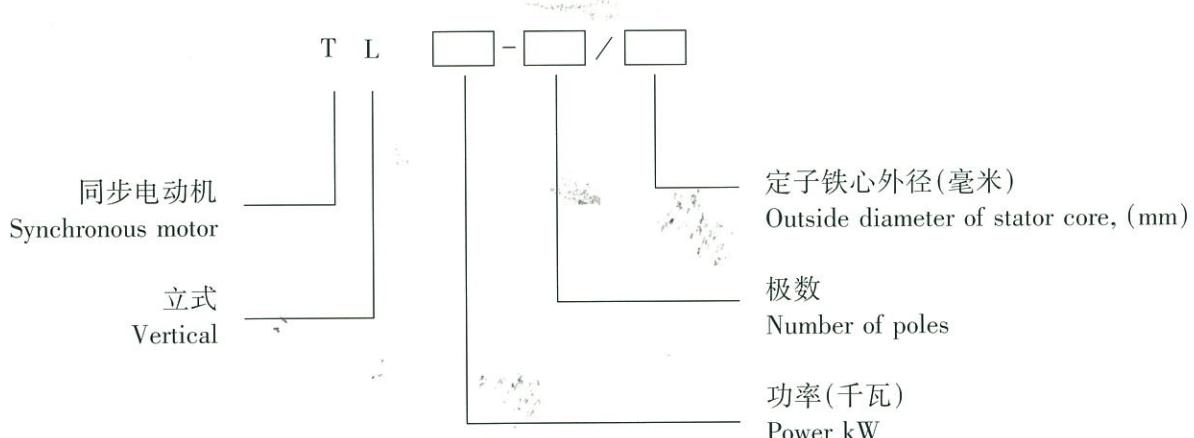

TL series large vertical synchronous motors are one of the varieties of our products. They have a long history, a reasonable construction and excellent performances and are mainly used for driving various types of vertical water pumps. With the development of water conservancy, the production for this type of motor increases year by year. Their operational experiences at various pumping stations throughout the country have proved them dependable in quality. They have been awarded as reliable products by the FMMB and products of high quality by Shanghai Municipality and are warmly received by the customers.

The motors of this type installed at various pumping stations, large or small, e.g., in Jiangsu province used for conveying water from the Yangtse River to the north; at the pumping stations of Simashan diversion project in Anhui province; at the large irrigation stations in various regions in Hubei province and at the pumping stations of the "Dongjiang - to - Shenzhen" diversion project in Quangdong province are playing an enormous role in ensuring the successful development of the agricultural water conservancy in these regions.

TL series large three - phase vertical motors used for driving various kinds of vertical water pumps are manufactured in conformity with the National Standard GB 755.

二 型 号 说 明

Symbol descriptions

三 结 构 特 点

本系列电动机一般为一端轴伸，通常用法兰轴伸结构与水泵刚性联接。通风方式有开启式自冷却通风，半管道通风式或封闭自循环通风。电动机一般为悬挂式结构，根据产品结构的需要也可制成半伞式结构。在悬挂式结构中，上机架装有推力轴承和上导轴承，下机架仅装设下导轴承。推力轴承除承受电动机转子重量外，并能承受水泵工作时的轴向力。上、下机架，机座等构件均为钢板焊接结构。

电动机的励磁装置一般为静止可控硅励磁装置或静止硅整流励磁装置。对某些大功率的立式电动机，通过协商按用户需要可装设定子测温元件及其他附属装置。

定子铁心用优质硅钢片冲制扇形片经过叠压成为整圆。定子绕组采用双层绕组，定子绕组的绝缘采用B级或F级VPI真空压力无溶剂浸渍绝

BRIEF IN CONSTRUCTION

Motors of this series are generally provided with shaft extension at only one end and rigidly coupled to water pumps through shaft extension flange. They are constructed with open type self-ventilation or semiduct ventilation or enclosed type self-circulating ventilation. The motors are generally of the overhang type construction, but construction of semi-umbrella type is also available according to customer's request. In the overhang type construction, the upper stand is provided with both thrust bearing and upper guiding bearing while the lower stand with lower guiding bearing only. Apart from sustaining the weight of the motor shaft, the thrust bearing is capable of sustaining the axial force of the pump during operation. Components, such as the upper and lower stands as well as the frame are welded and fabricated with steel plates.

The motors are generally excited with static SCR devices or static silicon rectifier devices. For some large-output vertical motors, temperature detecting elements can be embedded in the stator and other auxiliaries can be attached according to customer's requirements.

The stator core is a circular construction, built up

缘。

定子线圈有支架端箍支撑，用涤纶玻璃丝带绑扎，经过特殊绝缘处理，以保证定子线圈电气性能良好。线圈在铁心槽内及槽外都牢固固定，使线圈能承受长期运行及起动电流的冲击，而不致磨损和变形。同步电动机定子嵌线及绝缘处理期间还需经过绝缘质量的检查。

同步电动机的转子，在装配磁极及其线圈后，还须经过绝缘处理，以提高其防潮性能，确保在停机期间绝缘电阻不致有过大的变化。

TL 系列 7000 千瓦立式同步电动机，安装于江苏省江水北调工程皂河抽水站。6 米混流泵单机排水能力为 100 吨/秒。

在江苏省江都排灌站的电机，装有 800 千瓦、1000 千瓦和 3000 千瓦电机，共计 33 台。经过多年来的使用，运行稳定，性能良好，对苏北地区农业排灌起了重要作用。

本公司生产制造了近千台大型立式同步电动机，广泛在广东、山东、江苏、湖北、湖南、安徽、江西、内蒙古、黑龙江等地区的农业排灌站中运行。在我国的水利工程建设中取得了显著的成绩和发挥了巨大的作用。

with segments punched from high - quality sheet steel. The stator winding adopts the two - layer construction and its insulation is of class B or F, vacuum pressure impregnated with solventless varnish.

The stator end winding is binded with dacron glass cord and kept in place by the end bracing rings and the end winding overhang supports, and then undergoes a special insulation treatment so as to guarantee its excellent electrical properties. Coils are rigidly braced both inside and outside the stator slots so that they may be able to sustain the vibration during long - term operation and the impulse due to the starting current without wearing and deformation.

Quality inspection of the insulation is carried out during the stator is wound and insulation treatment is made.

After the poles along with their coils are assembled, the rotor should be put into an insulation treatment in order to raise its resistance to moisture and prevent the variation of the insulation resistance from being too great during shut - down period of the motor.

The TL series large 7000kW vertical synchronous motor is to be installed in Zaohe water pumping station in Jiangsu province to drive a 6 m mixed flow pump for conveying water from the Yangtze River to the north. The unit is capable of pumping water at the rate of 100ton/sec.

In the Jiangdu irrigation station, Jiangsu province there are installed 800 kW、1000kW、1600kW and 3000kW units of this series, accumulating to a total of 33 units. They have been proved reliable in operation and excellent in performance through several years' operation and have played an important role in the agricultural irrigation in north Jiangsu province.

Our company has manufactured nearly 1000 large-sized vertical synchronous motors, widely applied at agricultural irrigations in Shandong, Guangdong, Jiangsu, Hubei, Human, Anhui, Jiangxi, Heilongjiang, Inner Mongolia etc. province or regions. All of these motors have played or been playing great role in ensuring the successful development of the agricultural water conservancy in China.
